DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 11-17, 19 and 20 are finally rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There is no antecedent basis for "said pin" in claim 11.

Claim 19 appears to be a method of making or assembling the device and not a method of applying torque.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 18 is finally rejected under 35 U.S.C. 102(b) as being clearly anticipated by Goldschmidt as the reference shows applying torque to a pipe by using a screw to counter rotate two attached sliding jaw wrenches.

Response to Arguments

5. Applicant's arguments filed 15 November 2004 have been fully considered but they are not persuasive.

There are still improper antecedents that have not been fixed in claim 11.

Applicants have argued that claim 19 is clearly drawn to adding additional structure to the tool, i.e. an assembly step, as part of the method of applying torque to a pipe. This means that every time the method of claim 18 is used for the purpose of applying torque, claims 19 and 20 require that a new wrench be manufactured as these claims are drawn only to the method of assembling the wrench. Clearly this has nothing to do with the method of applying torque to a pipe, thus the claims are indefinite.

With respect to claim 18 having novel structure that is not shown in the prior reference to Goldschmidt, such may be the case, however the claim is not drawn to a new apparatus, but to a new method of applying torque to a pipe, thus it is the steps that must define over the prior art and clearly they do not. Goldschmidt performs the same steps for the same purpose, thus the reference anticipates the claimed method steps. The specific structure of the wrench is noted, but is of no patentable significance in the method steps.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
